CHEMISTRY

Chemistry, a natural science, studies the composition, structure, properties, and reactions of matter, especially of atomic and molecular systems. Courses include organic and inorganic chemistry as well as quantitative analysis. Chemistry courses satisfy general education requirements for the associate degree and lower division transfer and can be used to fulfill some of the major requirements for the physical science associate of science degree.

Learning Outcomes

This discipline prepares students to do the following:

- Formulate knowledge of chemical processes for use in professional fields related to the discipline.
- Develop knowledge of elements and the synthetic process of compounds as used in the chemistry discipline.
- Analyze and understand relevant chemical processes as well as related sciences (biology and physics) and logically apply them to the professional disciplines.
- Utilize the most current technological tools (computers, IR Spectroscopy) to assist in the study and development of processes related to the chemistry discipline.
